Subject: RE: Phase 2 data for Titleist

It's my bad cause I sent the letter and I don't think I ever discussed my concern with you regarding inclusion of that red line in the figure – I discussed it with Battelle. Not sure why the figure you sent, which I assume Battelle sent you, ended up including it after the version they prepared originally without it. I think it is too late now to correct, but we should discuss with Battelle and consider whether that marker should be included in public transmittals going forward. I would suggest it not be included.

Wow, Ginny, I'm sorry to have overlooked this. Maybe I just sent the wrong figure. Should I send the correct figure to Titleist, Marilyn, the City and DEP?

Elaine-

Not sure if you heard Marilyn ask about the red line in the Titleist data transmittal. That is for our planning purposes and should not have been included on the transmitted figure. Attached are the original versions that Battelle prepared with no red line. I had specifically instructed them not to include the red 3.1 ft elevation contour line, but somehow in the version that got sent to Titleist that line got put back in. Let's raise this with Battelle and Corps next week.

Elaine-

Can you take the lead on transmitting this data to DEP and AVX? You may want to run through it with Cindy. You should pull out the IRA and Phase II info on the Titleist surface soil contamination AVX has taken responsibility for just to see how that data compares to the data we have collected adjacent to that area and elsewhere on the Titleist property. Our correspondence to AVX and DEP – either an email or letter – should indicate that the extent of the Aerovox surface soil contamination at Titleist extends to other areas on Titleist as our data shows additional contamination above the MHW on this property. We should try to get this out in the next couple of weeks so that AVX has it in hand prior to the new Phase III deadline. We should share a draft with DEP before we send anything. Thanks a bunch.

Hi Ginny,

Attached is a map and data table showing the results for Parcel 112-133 (Titleist). The map and table are set up the same way as the individual maps and tables for Phase 1. Please let me know if you would like us to make any additional changes.

Thanks,

Patty

Patty-

Can you make me a figure and table of the Phase 2 data for the Titleist property – Parcel 112-133? We will send to DEP and AVX to indicate that contamination above MHW is from 21E overland flow.
